

# Platform Drill

Scent tin with kibble on the container

The scent tin is placed on top of a container (bucket, box, basket, platform, etc). Have the dog sit next to you lightly restrained or leashed. Make sure they are focused and when they look at the training prop release them with your search cue. They should run to the prop, eat the kibble and then you call them back to you and reset. Work on gradually increasing the distance from start to prop.
